0 of 0 review helpful A must have book for any serious informaticist By T Papke There have been numerous attempts to distill the essence of Bioinformatics and Health Informatics Many such as Shortliffe have done little more than give a sweeping historical treatment of the utilization of computers in the healthcare setting and the associated metadata structures that serve to allow these systems to document the many i Clinical Research Computing A Practitioner rsquo

s Handbook deals with the nuts and bolts of providing informatics and computing support for clinical research The subjects that the practitioner must be aware of are not only technological and scientific but also organizational and managerial Therefore the author offers case studies based on real life experiences in order to prepare the readers for the challenges they may face during their experiences either About the Author Dr Nadkarni has been working in the field of biomedical informatics since 1989 with over 100 peer reviewed publications in the field He is the lead developer of TrialDB an open source clinical study data management system which is used at m
